

Kanokpon Mettasat

Electrical & Computer Engineering, Honors Program

mettasatk27@vmi.edu | Lexington, VA | GitHub: gun321h-creator

ABOUT

Originally a **Royal Thai Army cadet (Class 74)**, selected first in the cohort for the army's study-in-US program in 2022. After completing the University of Colorado Boulder's International English Center (Levels 4 through 7) in 2022-2023, enrolled at Virginia Military Institute reading Electrical and Computer Engineering. Beyond coursework, builds software (FastAPI services, LINE OA bots) and runs quantitative trading research as an independent practice -- pre-registered hypotheses, walk-forward out-of-sample validation, and explicit bias auditing. Recent 2026 work spans a personal-finance aggregator (Money Compass), a research-automation pipeline (Edge Factory), a Groq-narrated trading journal, and a low-latency group-karaoke web app.

EDUCATION

Virginia Military Institute -- BS, Electrical and Computer Engineering (Aug 2023 -- May 2027 (expected))

- Honors Program; Dean's List; Overall GPA 3.79 / Major GPA 4.00.
- Tau Beta Pi -- Engineering Honor Society, Virginia Chapter (Nov 2025).
- IEEE SoutheastCon 2026 -- top 7 of 40 teams, Undergraduate Circuit Design (Mar 2026).
- Royal Thai Army Cadet School, Class 74 -- selected #1 of 348 for the army's study-in-US program (May 2022).

PROJECTS

Trading-research dashboard.

FastAPI + Jinja2 monitoring and decision-support dashboard for a personal quantitative-trading workflow. Surfaces include project tracking, an editorial organisation chart, a Phaser 3 isometric office-RPG view of active research agents, a live-demo strategy monitor with a tail-concentration auditor, and a Smart Money Radar that scores 13F / Form-4 / political-disclosure signals (1-100). Deployed via Tailscale Funnel to a Windows VPS with a hard-restart deploy script.

Python FastAPI Jinja2 Phaser 3 pytest

LINE Official Account bot.

Multi-owner LINE Messaging API bot with scheduled reminders, daily SQLite snapshots, Sunday digest, and pre-alert dedupe. Designed to run unattended on a Windows VPS with a self-healing restart loop.

Python FastAPI SQLite LINE Messaging API

Quantitative trading research framework.

60+ Python backtests across multi-asset OHLCV (FX majors, FX crosses, metals, indices, crypto) with pre-registered hypotheses, walk-forward out-of-sample validation, explicit bias auditing, and probabilistic Sharpe / deflated Sharpe gates. Companion literature review followed a PRISMA-style protocol across 63 IEEE papers with a multi-dimensional taxonomy.

Python pandas MetaTrader 5 API pytest

SKILLS

Languages: Python Web / API: FastAPI Data / Quant: pandas Tooling: pytest Infrastructure: Windows Server
